- Mountable over backlash free pivots heads with a large angle of free movement
- Maximum angular movement up to $\pm 30^\circ$
- Stroke up to 1000 mm
- Absolute measurement of displacement
- Resolution 0,01mm
- Very long life up to 100 million movements
- High operating speed 5 m/s

LTC-A is built easy mounting by double pivot heads. The only difference from the LTP series is the square frame body. It's a high precision 0/4-20 mA analog output industrial linear motion transducer with a long lasting conductive track suitable for absolute position measuring in control and Measurement applications. Designed for the direct, absolute measurement of displacement or angle in control regulation and measuring applications.

Mechanical fixing and self-aligning linkage using 2 ball joints. Maximum angular movement angle is up to $\pm 30^\circ$

High resolution (0.01 mm) combined with a stroke length of up to 1000 mm permits the accurate measurement of linear displacement.
